

Matías Sione

Full-Stack Developer · web, mobile and AI agents

Rosario, Argentina · +54 9 341 259-3656 · sionematias@krownsoft.com.ar · linkedin.com/in/msione03 · github.com/Tariima · msione-portfolio.vercel.app

PROFILE

I build software that runs real businesses today: custom ERPs, multi-tenant portals, mobile apps and AI agents over voice and WhatsApp. I take each business problem end to end, from the database to the deploy, with tests before every release. I work at Solvant and Krownsoft, take freelance projects and finish my programming degree at UTN this year.

EXPERIENCE

Full-Stack Developer · systems and AI agents

Solvant · Rosario, Argentina (remote) Apr 2026 – present

- Designed and built a law firm's system: an AI voice dialer and a WhatsApp collections bot with cadences, time windows and hand-off to a human operator.
- Lead developer of Solvant Platform, the portal where each client sees its voice agents and launches campaigns: multi-tenant with Row-Level Security, encrypted credentials and Retell sync.
- Frontend and data security for a multi-tenant marketing-agency platform (~20 workspaces): composer with social previews, calendar, kanban and a co-branded client portal.
- Custom ERP for an aluminium-joinery manufacturer: quoting engine, works module and end-to-end tests. In production since September 2026.
- B2B WhatsApp sales agents wired into Odoo: n8n workflows as code, automated evaluations before every deploy and monitoring.

Full-Stack Developer

Krownsoft · Rosario, Argentina (hybrid) Jul 2025 – present

- TaskFlow, real-time orders and production: FastAPI + PostgreSQL API, React dashboard, Flutter app for operators, WebSockets, roles and audit log. In production.
- CI/CD with GitHub Actions for staging and production, Docker and Nginx; overdue alerts, bulk imports and database concurrency fixes.
- ScoutPro: project structure and persistence. F-Tracker: two-factor authentication.

Freelance Full-Stack Developer

Own products and direct clients · Rosario, Argentina Jun 2026 – present

- Nocta, my own product: tickets, bar orders and QR door control for nightclubs; each venue collects into its own Mercado Pago and the door validates offline.
- Patrol traceability for a security company: web + Android app with geofences, random QR challenges, panic button and per-client isolation.
- Operational website for a photography studio: PDF quotes in under a minute and a QR benefits campaign.

Earlier: IT support and customer service (2018 – 2023).

OWN AND ACADEMIC PROJECTS

- Capstone (UTN): gym and workout platform with .NET and React; backend, team of three.
- Grow an Abyss: idle game for Roblox in Luau, playable prototype.
- NLP recommender for League of Legends: embeddings and semantic similarity.

AT A GLANCE

8 products in production

I have worked on since 2025

Web · mobile · AI

Next.js, FastAPI, Flutter, Expo, n8n, Retell

Data security

multi-tenant with RLS, encryption, 2FA

UTN · graduating 2026

University Technical Degree in Programming

Spanish · English B2

languages

STACK

Languages

TypeScript · JavaScript · Python · SQL · Dart · C# (.NET)

Frontend

React 19 · Next.js 15/16 · Tailwind CSS 4 · PWA

Backend

Node.js · FastAPI · REST · WebSockets · idempotent webhooks

Mobile

Flutter · React Native (Expo)

Data

PostgreSQL · Supabase (RLS, Auth, Storage) · Redis · SQL migrations

AI and automation

n8n · Retell AI · OpenAI API · DeepEval · Evolution API · Chatwoot · Odoo

DevOps

Docker · Nginx · GitHub Actions · Vercel · EasyPanel · Cloudflare · Linux

Security and quality

multi-tenant + RLS · AES-256-GCM · JWT / OAuth / 2FA · Vitest · pytest · Playwright

EDUCATION

University Technical Degree in Programming

UTN · Facultad Regional Rosario
2025 – 2026 · final semester

Information Systems Engineering (first year)

UTN · Facultad Regional Rosario
2022 – 2023

Technician in Professional and Personal Computing

Colegio Salesiano San José
2015 – 2021

COURSES

Python TOTAL – Advanced Programmer · Udemy · 2024

TensorFlow: CNNs and NLP · 2024
